SUMMARY

BCA graduate and Cloud/DevOps enthusiast with hands-on experience in AWS, Azure, Linux, Docker, Kubernetes, Jenkins, and Terraform, with projects in 3-tier architecture, CI/CD, and AWS–Azure VPN connectivity. Seeking an entry-level Cloud/DevOps Engineer role to apply my skills in cloud networking, automation, security, and monitoring.

TECHNICAL SKILLS

Cloud Platforms:	**Amazon Web Services** (Load Balancers, Autoscaling , S3, Cloud Front, WAF, System Manager, SNS, RDS, Route53, Volumes, IAM) ; **Microsoft Azure** (Vm, Vm scale set, App service,storage account, Front door, Logic apps, Active directory, VPN, Recovery services vault, hub-spoke)
DevOps & CI/CD:	Git, GitHub, GitHub Actions, Jenkins, CI/CD Pipelines, Docker, Kubernetes, Terraform
Kubernetes:	Amazon EKS, Deployments, Services, ConfigMaps, Secrets, Ingress, HPA, Namespaces, Helm
Networking & Security:	Subnetting, Route Tables, Security Groups, NACLs, NSGs, IAM, WAF, CloudTrail, VPC Flow Logs
Monitoring & Observability:	Prometheus, Grafana, Amazon CloudWatch, CloudWatch Alarms, SNS, Azure Monitor, Log Analytics
OS & Scripting:	Linux, Ubuntu , Bash, Python, |Nginx, Apache Tomcat Mysql

PROJECTS

Three-Tier Architecture on AWS github.com/Jafar151/three-tier-architecture

- Designed a high-availability 3-tier AWS architecture across two Availability Zones using public and private subnets.
- configured Application Load Balancers, Auto Scaling Groups, and Multi-AZ RDS MySQL for scalability and failover.
- Implemented security using AWS WAF, Security Groups, IAM, VPC Flow Logs, and CloudTrail.

End-to-End DevOps CI/CD Pipeline github.com/Jafar151/End-to-End-DevOps-CI-CD-Pipeline

- Built a Jenkins CI/CD pipeline with GitHub for automated build, scanning, and deployment.
- Used SonarQube, OWASP Dependency-Check, Trivy, and Docker for quality and security.
- Deployed the application to AWS EKS and monitored it using Prometheus and Grafana.

AWS–Azure Site-to-Site VPN Connectivity github.com/Jafar151/vpn-connectivity

- Designed and implemented a multi-cloud network connecting AWS VPC and Azure VNet using an IPsec Site-to-Site VPN.
- Configured AWS VPN Gateway, Azure VPN Gateway, route tables, Security Groups, and NSGs to enable secure private IP communication between AWS EC2 and Azure VM.
- Used Terraform (IaC) to automate AWS and Azure infrastructure provisioning and configuration.
